Are these attendees replacing the previous attendees as the Emergency Response Coordinators?			
<input type="checkbox"/> YES, they are replacing the previous attendees.			
<input type="checkbox"/> NO, they are in addition to any previous attendees. -OR- This is the FIRST time attending.			

Please print clearly and check spelling of names, as this form is used to print certificates that will be issued to participants after the meetings. To insure your space, send immediately with your payment.

COMPLIANCE REQUIREMENTS

HAZWOPER (29 CFR 1910.120)

*What is it? How does it affect my business?
What is my responsibility regarding my employees?*

In March of 1990, OSHA's final rule 29 CFR 1910.120, governing hazardous waste operations and emergency response, became effective. This has commonly become known as "HAZWOPER".

Under the HAZWOPER standard, any employee who might be called on to respond, or who has the potential to respond, to an emergency needs training. Just how much training depends on what the employee is expected to do? In Section Q of the standard, OSHA has divided the training requirements into five separate levels that are linked to the specific duties of individual employees.

For example, the first training level addresses the simplest observe-and-report function that employees may be expected to fulfill. Ultimately, training progresses toward the more complex duties of stopping the spill, cleaning it up, and disposing of the hazardous waste.

Five Training Levels are outlined in the regulation. **For certain Industries we have customized a program to meet their specific needs only.** In doing so, the following levels of training are covered. **This program is covered in four (4) hours. It includes testing and certification of completion. Awareness Level - Observe and report & First Responder Operations Level - Containing a leak or spill.**

EVERY FACILITY SHOULD HAVE AT LEAST THREE (3) EMPLOYEES TRAINED TO THIS LEVEL

D.O.T. – Hazardous Materials (49 CFR Subpart 4, 172.704)

Regulation 172.704 of the Dept. of Transportation establishes training and certification requirements for all employees who handle, prepare, supervise, or have responsibility for hazardous materials for transportation, or who transport hazardous materials.

Training must include the following: 1) General Awareness, 2) Safety, 3) Function or Job-Specific procedures, Shipping Papers, Manifests, Labels, and proper Containers, 4) Driver Training (where applicable), and 5) Security Awareness.

All employees must be certified, as having been properly trained, and training records must be maintained for each employee. **Most Parts Wholesalers, Automotive Dealerships, Body Shops and marine stores do store and ship several different classes of hazardous materials. The most common hazard classes are:**

- **Class 1.4 Explosive:** Flares, certain life rafts
- **Class 2.2 Non-flammable Gas:** Anti-lock brake accumulators, pump assemblies, Freon 12, R134A and certain aerosol products, shock absorbers, struts, flares and certain life rafts
- **Class 3 Flammable or Combustible Liquid:** Paints, windshield washer, brake cleaner, solvents, hazardous wastes, (including waste oil)
- **Class 8 Corrosive:** Batteries and battery acid, carb cleaner, wire wheel cleaner, metal preps, paint strippers, hazardous waste
- **Class 9 MISC:** Air bags and seat belt tensioning devices and hazardous wastes
- **Class ORM-D Consumer Commodity-Other Regulated Materials:** Aerosol products cleaners, degreasers, paints, and solvents

In your business, you may have employees who prepare or offer hazardous materials for shipment to other facilities or to wholesale accounts. Your employees may also transport these products from distribution facilities, provide delivery services to off-site facilities or to customers or generate hazardous waste. If you are involved in **any** of these activities, your business is required to provide adequate, documented training that meets all the requirements specified in 172.704 (HM-126F). All employees **who prepare** hazardous materials for shipment, **who transport** hazardous materials, or **who are responsible for shipping or transporting** hazardous materials must be trained. There are major penalties and fines for non-compliance.
